VOLUME 1, ISSUE 1

### **Custom Solutions:**

Please keep us in mind when your customer needs that 'something extra' for your pneumatic solutions.

This year we have met such diverse requirements as:

- ◆ Nickel plated valves and manifolds for an aircraft application,
- ◆ Complete custom controls for aluminum smelting lines, and
- ◆ Integration of our internals into machine control components for OEMs.

And ... we have added resources to help us get your ideas into your customers' hands faster. You will quote and close more quickly.

The valve pictured below is a recent example. The customer needed increased reliability on a critical circuit. Our solution - dual solenoids, which run from independent power sources. Time from request to prototype - two weeks!

**Remember:**

**AV is interested in meeting your customers' needs for custom valves.**

**We have a library of hundreds of proven, specialized pneumatic applications.**

**We designed over 50 custom applications in 1999 alone.**
